

LB12 – Fresh air to go

Stuffy air in your office – again? The smart LB12 will do the trick. Simply fill a standard plastic bottle with water and attach it to the air humidifier. High-frequency oscillations cause tiny micro droplets to disbond from the water surface, and the air stream generated by the fan conveys humidified air to the outside. With a nebulisation performance of up to 80 ml/h,

this little powerhouse is ideally suited for use in rooms of up to 20 m² or on desks. The manually adjustable mist outlet is attractively illuminated, providing additional relaxation. The LB12 is also automatically switched off when the water tank is empty. All components of this air humidifier can be hygienically cleaned in the dishwasher.
